Nectar iOS coding assignment

Build a simple iOS app that takes the JSON provided and displays it in a table view. Make the cell views tappable so a detail view can be shown. Feel free to build the app as you like however try to handle the JSON as if it came from a remote endpoint. You can embed the JSON into the app. The screen shots below are for guidance but you can embellish them as you see fit. In addition add any form of tests that you think appropriate. Try not to spend more than an hour or so on the task. Send you completed project files in a zip file.
